

An Internship Report

Of

Python Internship

Submitted

To

**School of Computer Science and Engineering
IILM University, Greater Noida, U.P.**

In partial fulfilment of the requirement of degree of
B.Tech (Computer Science and Engineering)

By

Roll Number of Student: **Rudra Singh Rawal**

Name of Student: **25scs1003002443**

Batch: **2025-2029**

CANDIDATE'S DECLARATION

I, Rudra Singh Rawal, hereby declare that this internship report titled “Python Internship – FixMate” has been prepared by me as part of the academic internship requirement for the B.Tech (Computer Science and Engineering) programme at IILM University, Greater Noida.

The report presents the learning activities and project work completed during my internship with Upskill Campus and its industry partner UniConverge Technologies Pvt. Ltd. I affirm that the work presented is based on my internship learning and project-development activities.

Student Name: Rudra Singh Rawal

Roll No.: 25SCS1003002443

Signature: _____

ACKNOWLEDGEMENT

I express my sincere gratitude to everyone who supported me throughout my internship programme. I am thankful to Upskill Campus and its industry partner UniConverge Technologies Pvt. Ltd. for providing me the opportunity to gain practical exposure in Python and web application development.

I also thank IILM University, Greater Noida, and the School of Computer Science and Engineering for providing the academic environment and guidance required to complete this internship. The internship helped me strengthen my Python fundamentals and apply them in the development of the FixMate web application.

I am grateful to my teachers, mentors, friends and family for their continuous encouragement and support during the learning and project-development process.

Student Name: Rudra Singh Rawal

Certificate will be attached here later.

Internship Offer Letter

Date: **15-07-2026**

Name: **Rudra Singh Rawal**

Email: **rudra.25scs1003002443@iilm.edu**

Location: **Remote**

Dear **Rudra Singh Rawal**,

We are pleased to inform you that **Upskill Campus** alongwith its industry Partner **UniConverge Technologies Pvt. Ltd.** has agreed to provide you internship as **Python Intern**
Your appointment of service is based on the following terms and conditions.

1. The internship shall start from **15-07-2026**
2. **Internship:** The internship period will be 4 to 6 weeks, starting from the date of joining.
3. **Working Hours:** The internship runs from 10:00 AM to 6:00 PM.

On behalf of both the Company, we wish you every success in your position and trust that our relationship will be long and mutually rewarding.

Sincerely

For Upskill Campus and UniConverge Technologies Pvt. Ltd.

Prabha Singh
HR Manager

1. INTERNSHIP OVERVIEW

This report presents the work completed during my Python internship and the associated FixMate project. The internship was provided by Upskill Campus along with its industry partner UniConverge Technologies Pvt. Ltd. The supplied offer letter identifies the role as Python Intern, the mode as Remote, the start date as 15-07-2026, and working hours as 10:00 AM to 6:00 PM.

For this report, the internship end date is recorded as 15-08-2026. The internship focused on Python programming, practical web development and project implementation.

Internship Details

Designation	Python Intern
Organization	Upskill Campus
Industry Partner	UniConverge Technologies Pvt. Ltd.
Mode	Remote / Online
Start Date	15-07-2026
End Date	15-08-2026
Working Hours	10:00 AM – 6:00 PM
Domain	Python
Project	FixMate

2. Organization & Program Profile

According to the supplied offer letter, Upskill Campus, along with its industry partner UniConverge Technologies Pvt. Ltd., provided the internship opportunity for the role of Python Intern. The offer letter records a start date of 15-07-2026, an internship period of 4 to 6 weeks from the date of joining, and working hours of 10:00 AM to 6:00 PM.

3. INTERNSHIP OBJECTIVES

- Strengthen Python programming fundamentals and logical problem-solving.
- Understand decision-making and control flow using conditional statements.
- Apply Python concepts to a functional web application.
- Develop FixMate as a practical troubleshooting and support web application.
- Use Flask for backend routing and request/response handling.
- Use SQLite for persistent project data storage.
- Create a simple HTML/CSS/JavaScript interface for user interaction.
- Practise validation, testing, debugging and project documentation.
- Organize and prepare the project for GitHub submission.

4. LEARNING PROGRESS

The internship learning activities covered Python programming fundamentals and practical application development. The documented weekly work included revision of Python basics, conditional statements, Boolean conditions, comparison operators, decision-making and control flow, along with practice and knowledge assessment.

Key Topics and Activities

- Python fundamentals and syntax
- if, if-else and if-elif-else
- Boolean conditions and comparison operators
- Decision-making and program flow
- Correct Python indentation
- Practice questions and quiz-based assessment
- Applying Python concepts in the FixMate project

5. PROJECT DESCRIPTION – FIXMATE

FixMate is a Python and Flask-based troubleshooting and support web application. It is designed to help users identify common technical problems and access appropriate support options through a simple web interface. The project includes separate pages for users and administrative functions.

5.1 Project Objectives

- Provide a simple interface for reporting technical problems.
- Allow users to select an appropriate problem type.
- Provide troubleshooting/support options for common issues.
- Provide support-request functionality.
- Allow users to check complaint/request status.
- Provide an admin interface for managing submitted requests and status.
- Store relevant application information using SQLite.

5.2 Main Features

- Home/user interface.
- Problem Type selection.
- Computer, Printer, Projector and Wi-Fi related support options.
- Support request page.
- Complaint/status checking page.
- Admin login and dashboard.
- Admin-side request/status management.
- SQLite-backed local data storage.

6. TECHNOLOGY STACK

Python	Application logic and backend programming
Flask	Web framework, routing and request/response handling
SQLite	Persistent local database storage
HTML5	Page structure, forms and interface
CSS3	Frontend styling and layout
JavaScript	Client-side interaction where implemented

6.1 Project Structure

```
FixMate/  
  appf.py  
  fixmate.db  
  templates/  
    index.html  
    admin.html  
    login.html  
    status.html  
    support.html
```

7. SYSTEM ARCHITECTURE & WORKING

The application follows a simple web-application flow connecting the user interface, Flask backend, application logic and SQLite database.

Architecture Flow

- USER — selects a technical problem or support option.
- HTML/CSS/JavaScript — collects input and displays the interface.
- FLASK BACKEND — handles routes, requests and application logic.
- SQLITE DATABASE — stores relevant application/request information.
- ADMIN MODULE — provides management of submitted requests and their status.

7.1 Working Steps

- User opens the FixMate web interface.
- User selects the required problem type or support option.
- Flask processes the request through application routes.
- Relevant information is stored or retrieved through SQLite where required.
- Users can access status information for submitted requests.
- The admin side provides management and status-update functionality.

8. DATABASE DESIGN

SQLite is used as the local database for the FixMate application. It provides lightweight persistent storage suitable for a small Flask web application and supports the project's request/support workflow.

The supplied project contains a local database file named `fixmate.db`. This report avoids inventing schema fields that are not explicitly documented.

9. TESTING & RESULTS

Functional checks were considered for the major user and administrative flows of the FixMate application.

- Main page loads correctly.
- Problem Type selection opens the relevant option/page.
- Support interface is accessible.
- Support/request information can be processed according to the application flow.
- Status page displays available request information.
- Admin login provides access to the administrative interface.
- Admin functions support request/status management as implemented.

10. GITHUB SUBMISSION

The project is prepared for GitHub-based submission and documentation. The GitHub username provided for this report is rawalrudra2006-star.

GITHUB REPOSITORY LINK

Paste / write the final repository URL here

11. SKILLS & LEARNING OUTCOMES

- Python programming and decision-making logic.
- Conditional statements and comparison operators.
- Flask-based web application development.
- HTTP request/response flow and routing.
- SQLite database usage and persistent storage.
- HTML/CSS frontend development.
- Basic JavaScript interaction.
- Input handling and functional testing.
- Git/GitHub project organization and documentation.

12. CHALLENGES AND APPROACH

During the learning phase, understanding the differences between conditional structures, maintaining correct Python indentation and applying concepts to practical questions required attention. These challenges were addressed through examples, step-by-step reasoning, practice questions and review of mistakes.

During FixMate development, connecting frontend pages with Flask routes, handling user flows, integrating SQLite storage and organizing separate user and admin pages required iterative checking. Testing was used to verify the application's behaviour.

13. CONCLUSION

The internship provided a practical pathway from Python fundamentals to web application development. The learning activities strengthened understanding of Python programming, decision-making logic and program flow, while the FixMate project applied these concepts through Flask, SQLite and frontend technologies.

FixMate demonstrates how Python can be used to develop a practical support-oriented web application with user-facing pages, problem categories, support functionality, status tracking and administrative management. Overall, the internship contributed to practical Python development skills, web-application understanding, database usage, testing and project documentation.
